

Rotary Top Brush

HANNA

Rotary Top Brush

Hanna has sold more **Rotary Top Brushes** than any other manufacturer in the world. That is because **Hanna's Rotary Top Brush** is the safest, simplest and most effective top brush in the industry. The brush action is very smooth over the contour of the vehicle and Hanna's exclusive brush design is also the quietest top brush available in the market today. Hanna's exclusive counterweight design utilizes dual dampening pneumatic cylinders for constant and gentle brush penetration over the hood, roof and trunk of the vehicle. The smooth rotational motion allows for cleaning coverage capable of reaching the front hood of low vehicles as well as the top rear of SUV's. Hanna's versatile top brush easily fits into a variety of Hanna's current frame structures allowing for the stacking of multiple components in tight spaces. The **Hanna Rotary Top Brush** also retrofits into nearly every generation of Hanna Car Wash Systems.
